

**Problem:**

They cannot extract insights from customer feedback fast enough to prevent financial & reputational damage.

**Why?**

- 1) It takes multiple days to manually assort the reviews based on category and urgency
- 2) Different people might understand different languages and emotions differently.
- 3) They read many different reviews, and fail to detect any implicit trends in the reviews.

**Challenge 3**

**Main Idea:** Increase of customer support requests, and a lot of negative 'reviews'.

**By Addressing  
Challenge 1**

**we essentially...**

- 1) Identify major product issues and reduce the recurring complaints.
- 2) More employees to work with 'live' customer support, improving customer satisfaction.

**ROI:** Improved Customer Experience + Upheld Brand Value + \$2.4M Per Quarter

## So... How Should We Address Challenge 1?

Identify Goals:

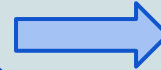

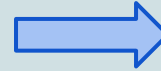

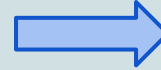

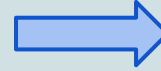

a) Reduce complaint / trend detection time from 3-5 days → within minutes

b) Standardize review interpretations beyond languages and emotions

c) Identify emerging product failures before revenue impact

d) Allow for proactive merchandising decisions through categorized reviews

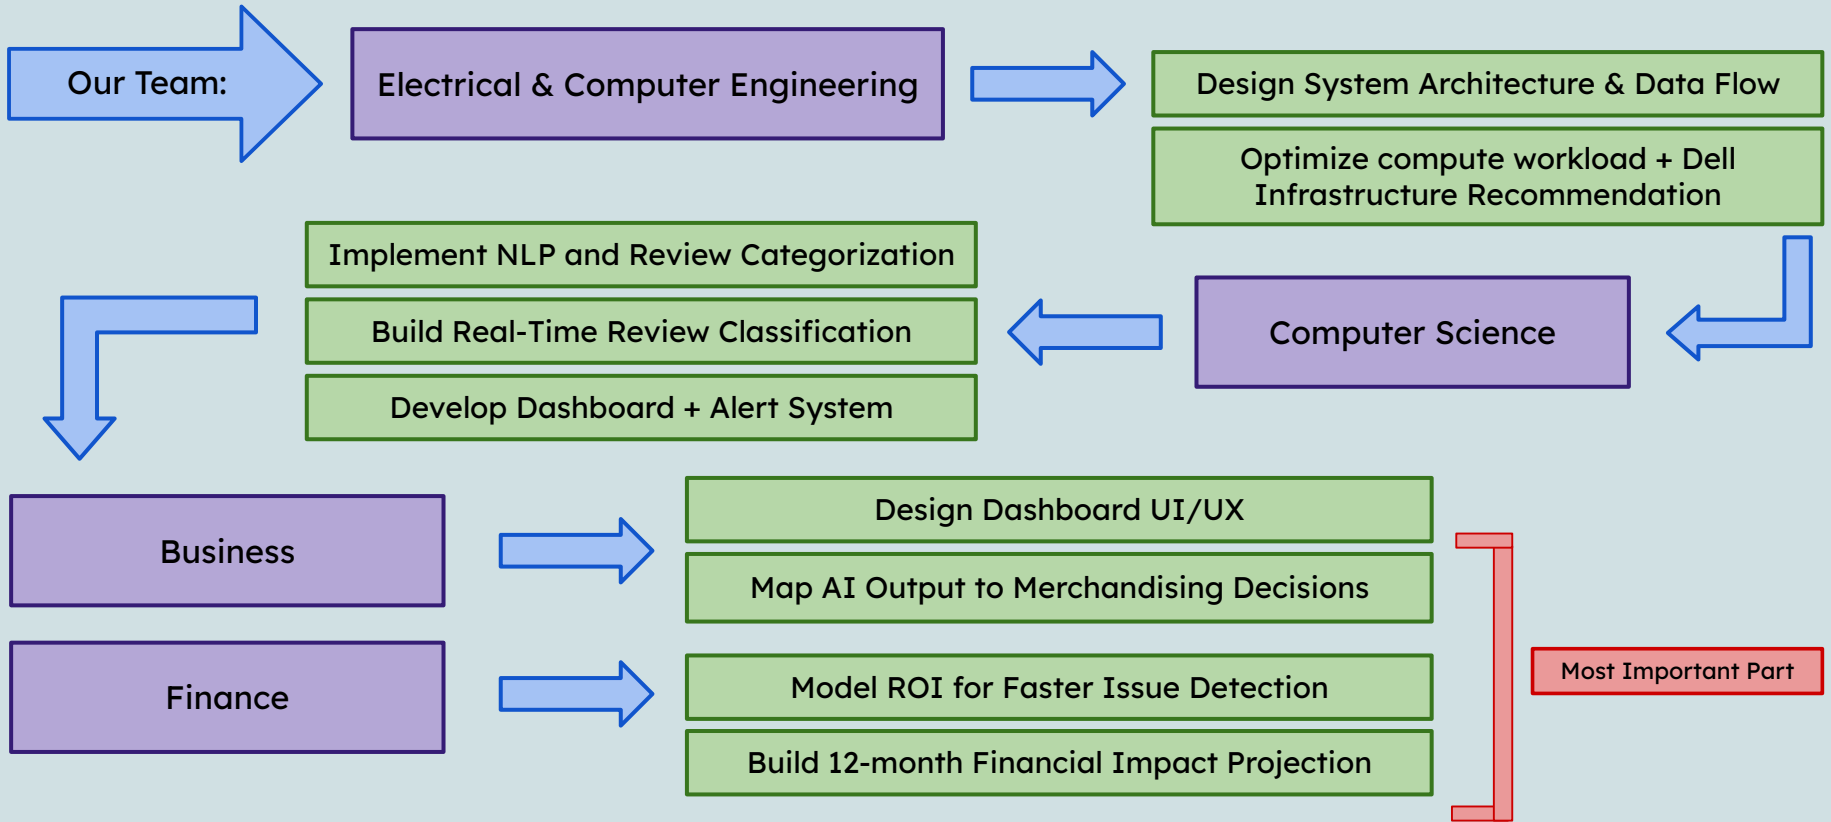

Automatic analysis for every incoming review

- Detect and group complain themes
- Assign weights to high-impact failures
- Track the rate of increase in complaints per products.

**Bonus:** Addresses part of challenge 2 by informing marketing about the latest successful and disliked products.

**“Product Risk Score” + Live Dashboard**

**AI Agent-based + Real-Time Product Risk Management System**

**How can we make our solution unique & useful in a business perspective?**
